

U.S.N.

# B.M.S. College of Engineering, Bengaluru-560019

Autonomous Institute Affiliated to VTU

## June 2025 Semester End Main Examinations

Programme: B.E.

Semester: VI

Branch: Artificial Intelligence and Machine Learning

Duration: 3 hrs.

Course Code: 24AM6PCDEL / 22AM6PCDEL

Max Marks: 100

Course: Deep Learning

**Instructions:** 1. Answer any FIVE full questions, choosing one full question from each unit.  
2. Missing data, if any, may be suitably assumed.

Important Note: Completing your answers, compulsorily draw diagonal cross lines on the remaining blank pages. Revealing of identification, appeal to evaluator will be treated as malpractice.			UNIT - I	CO	PO	Marks
	1	a)	Write the Stochastic Gradient Descent (SGD) with Nesterov momentum algorithm.	CO1	PO1	06
		b)	Using mathematical equations, demonstrate how both linear and non-linear variants of the ReLU activation function will address the "dying ReLU" problem.	CO2	PO2	10
		c)	Illustrate the significance of data augmentation.	CO1	PO1	04
			OR			
	2	a)	Explain the role of ReLU properties in preventing local minima in deep neural networks.	CO1	PO1	06
		b)	i. Describe the challenges posed by the vanishing gradient problem in deep learning models. ii. Discuss strategies to address this issue.	CO1	PO1	06
		c)	For a binary classification problem where a neural network predicts whether an image contains a cat (class 1) or not (class 0), with true labels $y = [0,0,1,1,1]$ and predicted probabilities $p=[0.8,0.4,0.9,0.77,0.2]$ , calculate the cross-entropy loss to determine the error between the predictions and the true labels.	CO2	PO1	08
			UNIT - II			
	3	a)	Explain the impact of early stopping and detail on its role as a regularization technique.	CO1	PO1	08
		b)	Elaborate on the limitations of using gradient clipping.	CO2	PO2	06
		c)	Describe the concept of parameter tying and parameter sharing using a suitable application.	CO1	PO1	06
			OR			
	4	a)	Compare RMSProp and RMSProp with Nesterov momentum.	CO1	PO1	06
		b)	Consider a fully connected base network with two input units, one hidden layer containing two hidden units, and one output unit.	CO2	PO1	08

		Illustrate the base network and show all possible sub-networks that can be created by applying dropout to various subsets of the units.									
	c)	Write an early stopping meta-algorithm to determine the best amount of training time.	CO2	PO1	06						
		UNIT - III									
5	a)	Compute the values of forget gate and new cell state $\tilde{c}_t$ of a Long Short Term Memory (LSTM) cell by considering the given data <table><tr><td>Weights for the forget gate <math>W_f = \begin{bmatrix} 0.6 &amp; 0.5 \\ 0.4 &amp; 0.3 \end{bmatrix}</math> Hidden state <math>h_{t-1} = \begin{bmatrix} 0.1 \\ 0.2 \end{bmatrix}</math></td><td>Recurrent weights for the forget gate <math>U_f = \begin{bmatrix} 0.2 &amp; 0.3 \\ 0.4 &amp; 0.5 \end{bmatrix}</math> Biases for the forget gate <math>b_f = \begin{bmatrix} 0.1 \\ 0.2 \end{bmatrix}</math></td></tr><tr><td>Input vector <math>x_t = \begin{bmatrix} 0.5 \\ 0.6 \end{bmatrix}</math></td><td>Weights for the cell state <math>W_c = \begin{bmatrix} 0.2 &amp; 0.1 \\ 0.1 &amp; 0.2 \end{bmatrix}</math></td></tr><tr><td>Recurrent weights for the cell state <math>U_c = \begin{bmatrix} 0.4 &amp; 0.5 \\ 0.6 &amp; 0.7 \end{bmatrix}</math></td><td>Biases for the cell state <math>b_c = \begin{bmatrix} 0.1 \\ 0.2 \end{bmatrix}</math></td></tr></table>	Weights for the forget gate $W_f = \begin{bmatrix} 0.6 & 0.5 \\ 0.4 & 0.3 \end{bmatrix}$ Hidden state $h_{t-1} = \begin{bmatrix} 0.1 \\ 0.2 \end{bmatrix}$	Recurrent weights for the forget gate $U_f = \begin{bmatrix} 0.2 & 0.3 \\ 0.4 & 0.5 \end{bmatrix}$ Biases for the forget gate $b_f = \begin{bmatrix} 0.1 \\ 0.2 \end{bmatrix}$	Input vector $x_t = \begin{bmatrix} 0.5 \\ 0.6 \end{bmatrix}$	Weights for the cell state $W_c = \begin{bmatrix} 0.2 & 0.1 \\ 0.1 & 0.2 \end{bmatrix}$	Recurrent weights for the cell state $U_c = \begin{bmatrix} 0.4 & 0.5 \\ 0.6 & 0.7 \end{bmatrix}$	Biases for the cell state $b_c = \begin{bmatrix} 0.1 \\ 0.2 \end{bmatrix}$	CO3	PO3	10
Weights for the forget gate $W_f = \begin{bmatrix} 0.6 & 0.5 \\ 0.4 & 0.3 \end{bmatrix}$ Hidden state $h_{t-1} = \begin{bmatrix} 0.1 \\ 0.2 \end{bmatrix}$	Recurrent weights for the forget gate $U_f = \begin{bmatrix} 0.2 & 0.3 \\ 0.4 & 0.5 \end{bmatrix}$ Biases for the forget gate $b_f = \begin{bmatrix} 0.1 \\ 0.2 \end{bmatrix}$										
Input vector $x_t = \begin{bmatrix} 0.5 \\ 0.6 \end{bmatrix}$	Weights for the cell state $W_c = \begin{bmatrix} 0.2 & 0.1 \\ 0.1 & 0.2 \end{bmatrix}$										
Recurrent weights for the cell state $U_c = \begin{bmatrix} 0.4 & 0.5 \\ 0.6 & 0.7 \end{bmatrix}$	Biases for the cell state $b_c = \begin{bmatrix} 0.1 \\ 0.2 \end{bmatrix}$										
	b)	Differentiate between Bi-directional Recurrent Neural Networks (RNN) and Multi-layer Recurrent Neural Networks.	CO2	PO2	06						
	c)	Elaborate on the exploding gradient problem in Recurrent Neural Network.	CO1	PO1	04						
		OR									
6	a)	Compute the values of reset gate and the new hidden State $h_t$ of a Gated Recurrent Unit (GRU) cell by considering the given data <table><tr><td>Weights for the reset gate <math>W_r = \begin{bmatrix} 0.1 &amp; 0.2 &amp; 0.3 &amp; 0.4 \\ 0.5 &amp; 0.6 &amp; 0.7 &amp; 0.8 \end{bmatrix}</math> Previous hidden state <math>h_{t-1} = [0.1, 0.4]</math></td><td>Biases for the reset gate <math>b_r = [0.1, 0.2]</math> Input vector <math>x_t = [0.5, -0.2]</math></td></tr><tr><td>Candidate hidden state <math>\tilde{h}_t \approx \begin{bmatrix} 0.2246 \\ 0.5208 \end{bmatrix}</math></td><td>Update Gate <math>z_t \approx \begin{bmatrix} 0.5646 \\ 0.6630 \end{bmatrix}</math></td></tr></table>	Weights for the reset gate $W_r = \begin{bmatrix} 0.1 & 0.2 & 0.3 & 0.4 \\ 0.5 & 0.6 & 0.7 & 0.8 \end{bmatrix}$ Previous hidden state $h_{t-1} = [0.1, 0.4]$	Biases for the reset gate $b_r = [0.1, 0.2]$ Input vector $x_t = [0.5, -0.2]$	Candidate hidden state $\tilde{h}_t \approx \begin{bmatrix} 0.2246 \\ 0.5208 \end{bmatrix}$	Update Gate $z_t \approx \begin{bmatrix} 0.5646 \\ 0.6630 \end{bmatrix}$	CO3	PO3	10		
Weights for the reset gate $W_r = \begin{bmatrix} 0.1 & 0.2 & 0.3 & 0.4 \\ 0.5 & 0.6 & 0.7 & 0.8 \end{bmatrix}$ Previous hidden state $h_{t-1} = [0.1, 0.4]$	Biases for the reset gate $b_r = [0.1, 0.2]$ Input vector $x_t = [0.5, -0.2]$										
Candidate hidden state $\tilde{h}_t \approx \begin{bmatrix} 0.2246 \\ 0.5208 \end{bmatrix}$	Update Gate $z_t \approx \begin{bmatrix} 0.5646 \\ 0.6630 \end{bmatrix}$										
	b)	Illustrate the time layered representation of RNN.	CO2	PO2	06						
	c)	Describe the modified Back Propagation Through Time (BPTT) algorithm used in bidirectional RNN.	CO1	PO1	04						
		UNIT - IV									
7	a)	Design a Convolutional Neural Network (CNN) with the following specifications to classify images of cats and dogs.	CO3	PO3	10						

		<p>Represent the size of the intermediate feature maps precisely on the architectural design.</p> <ul style="list-style-type: none"><li>• <b>Input:</b> (32, 32, 3 channels)</li><li>• <b>Conv1:</b> 32 filters, kernel: 3x3, padding = 1, activation function: ReLU</li><li>• <b>Pool1:</b> 2x2 Max Pooling, Stride = 2</li><li>• <b>Conv2:</b> 64 filters, kernel: 3x3, padding = 1, activation function: ReLU</li><li>• <b>Pool2:</b> 2x2 Max Pooling , Stride = 2</li><li>• <b>Conv3:</b> 128 filters, kernel: 3x3, padding = 1, activation function: ReLU</li><li>• <b>Pool3:</b> 2x2 Max Pooling , Stride = 2</li><li>• <b>Flatten</b></li><li>• <b>Dense:</b> 256 neurons, activation function: ReLU</li><li>• <b>Output:</b> 2 neurons, activation function: Softmax</li></ul>																																																									
	b)	Explain the significance of pooling in CNN.	CO1	PO1	04																																																						
	c)	How does Tangent Propagation help in reducing over fitting of a model?	CO2	PO2	06																																																						
		OR																																																									
8	a)	<p>Consider a Convolutional Neural Network (CNN) with the following configuration:</p> <p>An input image of size 6x6:</p> <table><tr><td>1</td><td>2</td><td>3</td><td>0</td><td>1</td><td>2</td></tr><tr><td>4</td><td>5</td><td>6</td><td>1</td><td>0</td><td>3</td></tr><tr><td>7</td><td>8</td><td>9</td><td>2</td><td>1</td><td>0</td></tr><tr><td>1</td><td>2</td><td>3</td><td>0</td><td>1</td><td>2</td></tr><tr><td>4</td><td>5</td><td>6</td><td>1</td><td>0</td><td>3</td></tr><tr><td>7</td><td>8</td><td>9</td><td>2</td><td>1</td><td>0</td></tr></table> <p>Two 3x3 filter (kernel) with weights:</p> <table><tr><td>1</td><td>0</td><td>-1</td></tr><tr><td>1</td><td>0</td><td>-1</td></tr><tr><td>1</td><td>0</td><td>-1</td></tr></table> <table><tr><td>1</td><td>1</td><td>1</td></tr><tr><td>0</td><td>0</td><td>0</td></tr><tr><td>-1</td><td>-1</td><td>-1</td></tr></table> <ol style="list-style-type: none"><li>Perform convolution operation on the given input image using the specified filter and stride = 1. Write the resulting feature map.</li><li>Apply ReLU activation function to the result obtained in (i). Represent the updated feature map in the matrix form.</li><li>Perform max pooling on the feature map obtained from (ii) using 2*2 pooling window and stride = 2. Determine the resulting feature map.</li></ol>	1	2	3	0	1	2	4	5	6	1	0	3	7	8	9	2	1	0	1	2	3	0	1	2	4	5	6	1	0	3	7	8	9	2	1	0	1	0	-1	1	0	-1	1	0	-1	1	1	1	0	0	0	-1	-1	-1	CO3	PO3	10
1	2	3	0	1	2																																																						
4	5	6	1	0	3																																																						
7	8	9	2	1	0																																																						
1	2	3	0	1	2																																																						
4	5	6	1	0	3																																																						
7	8	9	2	1	0																																																						
1	0	-1																																																									
1	0	-1																																																									
1	0	-1																																																									
1	1	1																																																									
0	0	0																																																									
-1	-1	-1																																																									
	b)	Illustrate the effect of increasing the stride on the spatial dimensions of the output feature map in a convolutional layer.	CO2	PO2	04																																																						
	c)	Differentiate between Tangent distance, Euclidian distance and Manifold distance.	CO1	PO1	06																																																						

			<b>UNIT - V</b>			
	9	a)	Elaborate on the process of learning the weights of a Boltzmann Machine using appropriate mathematical representations.	CO2	PO2	<b>07</b>
		b)	A Boltzmann Machine consists of two visible units $v_1$ , $v_2$ and a hidden unit $h$ . The weights between these units are as follows: Weight between $v_1$ and $h = 1$ , Weight between $v_2$ and $h = -1$ . There are no direct connections between $v_1$ and $v_2$ . The states of the units can be either 0 or 1. Calculate the energy $E(v_1, v_2, h)$ of the system for the state $(v_1, v_2, h) = (1, 0, 1)$	CO3	PO3	<b>05</b>
		c)	Describe the procedure involved in training a multilayer Restricted Boltzmann Machine (RBM).	CO2	PO2	<b>08</b>
			<b>OR</b>			
	10	a)	Describe the process of training a Hopfield network along with relevant mathematical representations.	CO1	PO1	<b>08</b>
		b)	Explain the challenges in applying RBM's to non-binary data compared to binary data?	CO1	PO1	<b>06</b>
		c)	Differentiate Restricted Boltzman Machine and Boltzman Machine.	CO1	PO1	<b>06</b>
