

# B.M.S. College of Engineering, Bengaluru-560019

Autonomous Institute Affiliated to VTU

## February 2025 Semester End Main Examinations

Programme: B.E.

Branch: Industrial Engineering and Management

Course Code: 23IM4BSSFE / 22IM4BSSFE

Course: Statistics For Engineers

Semester: IV

Duration: 3 hrs.

Max Marks: 100

- Instructions:** 1. Answer any FIVE full questions, choosing one full question from each unit.  
2. Missing data, if any, may be suitably assumed.

<b>Important Note:</b> Completing your answers, compulsorily draw diagonal cross lines on the remaining blank pages. Revealing of identification, appeal to evaluator will be treated as malpractice.		<b>UNIT – I</b>	<i>CO</i>	<i>PO</i>	<b>Marks</b>																																								
	1	a)	Explain the phases of statistics with an example.	<i>CO1</i>	<i>PO1</i>	<b>04</b>																																							
		b)	A highly classified study was conducted and the following data was recorded for a sample of 30 observations as shown in the table below  <table border="1" style="margin-left: auto; margin-right: auto;"> <tr><td>5.02</td><td>4.50</td><td>4.61</td><td>5.55</td><td>2.05</td><td>2.11</td></tr> <tr><td>5.51</td><td>2.08</td><td>2.29</td><td>5.46</td><td>3.75</td><td>5.05</td></tr> <tr><td>1.50</td><td>4.49</td><td>3.04</td><td>3.35</td><td>5.57</td><td>3.89</td></tr> <tr><td>1.67</td><td>1.68</td><td>3.74</td><td>1.67</td><td>4.41</td><td>2.92</td></tr> <tr><td>1.76</td><td>3.21</td><td>5.64</td><td>4.03</td><td>2.06</td><td>6.00</td></tr> </table> i. Construct box plot for frequencies and comment on outliers. ii. Construct the frequency polygon curve and Ogive curve for the following data iii. Estimate the mean, median, mode and variance.	5.02	4.50	4.61	5.55	2.05	2.11	5.51	2.08	2.29	5.46	3.75	5.05	1.50	4.49	3.04	3.35	5.57	3.89	1.67	1.68	3.74	1.67	4.41	2.92	1.76	3.21	5.64	4.03	2.06	6.00	<i>CO1</i> <i>CO2</i>	<i>PO1</i> <i>PO2</i>	<b>16</b>									
	5.02	4.50	4.61	5.55	2.05	2.11																																							
	5.51	2.08	2.29	5.46	3.75	5.05																																							
	1.50	4.49	3.04	3.35	5.57	3.89																																							
	1.67	1.68	3.74	1.67	4.41	2.92																																							
	1.76	3.21	5.64	4.03	2.06	6.00																																							
			<b>OR</b>																																										
	2	a)	Explain how mechanistic and Empirical models play an important role in Statistical Modeling Frame work	<i>CO1</i>	<i>PO1</i>	<b>08</b>																																							
	b)	The following are the measurements of the product chart in mm  <table border="1" style="margin-left: auto; margin-right: auto;"> <tr><td>146</td><td>148</td><td>146</td><td>140</td><td>150</td><td>146</td><td>142</td><td>150</td><td>150</td><td>152</td></tr> <tr><td>146</td><td>150</td><td>158</td><td>148</td><td>140</td><td>152</td><td>160</td><td>162</td><td>146</td><td>156</td></tr> <tr><td>150</td><td>150</td><td>146</td><td>152</td><td>150</td><td>148</td><td>148</td><td>150</td><td>150</td><td>148</td></tr> <tr><td>152</td><td>146</td><td>156</td><td>156</td><td>142</td><td>146</td><td>146</td><td>154</td><td>152</td><td>150</td></tr> </table> I. Estimate the mean, mode, median, standard deviation and variance for the same. II. Construct a frequency polygon and histogram considering all classes. Comment about the population.	146	148	146	140	150	146	142	150	150	152	146	150	158	148	140	152	160	162	146	156	150	150	146	152	150	148	148	150	150	148	152	146	156	156	142	146	146	154	152	150	<i>CO1</i> <i>CO2</i>	<i>PO1</i> <i>PO2</i>	<b>12</b>

<b>UNIT – II</b>					
3	a)	<p>The number of telephone calls that arrive at a phone exchange is often modeled as a Poisson random variable. Assume that on the average there are 10 calls per hour.</p> <p>i) What is the probability that there are exactly 5 calls in one hour?</p> <p>ii) What is the probability that there are 3 or fewer calls in one hour?</p> <p>iii) What is the probability that there are exactly 15 calls in two hours?</p> <p>iv) What is the probability that there are exactly 5 calls in 30 minutes?</p>	<i>COI</i>	<i>POI</i>	<b>08</b>
	b)	<p>Heart failure is due to either natural occurrences (87%) or outside factors (13%). Outside factors are related to induced substances or foreign objects. Natural occurrences are caused by arterial blockage, disease, and infection. Suppose that 20 patients will visit an emergency room with heart failure. Assume that causes of heart failure for the individuals are independent.</p> <p>i. What is the probability that three individuals have conditions caused by outside factors?</p> <p>ii. What is the probability that three or more individuals have conditions caused by outside factors?</p> <p>iii. What are the mean and standard deviation of the number of individuals with conditions caused by outside factors?</p>	<i>COI</i>	<i>POI</i>	<b>06</b>
	c)	<p>Problem illustrates that poor quality can affect schedules and costs. A manufacturing process has 100 customer orders to fill. Each order requires one component part that is purchased from a supplier. However, typically, 2% of the components are identified as defective, and the components can be assumed to be independent.</p> <p>(a) If the manufacturer stocks 100 components, what is the probability that the 100 orders can be filled without reordering components?</p> <p>(b) If the manufacturer stocks 102 components, what is the probability that the 100 orders can be filled without reordering components?</p> <p>(c) If the manufacturer stocks 105 components, what is the probability that the 100 orders can be filled without reordering components?</p>	<i>COI</i> <i>CO2</i>	<i>POI</i> <i>PO2</i>	<b>06</b>
<b>OR</b>					
4	a)	<p>The probability density function of the length of a metal rod is <math>f(x) = 2</math> for <math>2.3 &lt; x &lt; 2.8</math> meters.</p> <p>(i) If the specifications for this process are from 2.25 to 2.75 meters, what proportion of rods fail to meet the specifications?</p> <p>(ii) Assume that the probability density function is <math>f(x) = 2</math> for an interval of length 0.5 meters. Over what value should the density be centered to achieve the greatest proportion of rods within specifications?</p> <p>(iii) Determine the cumulative distribution function for the distribution. Use the cumulative distribution function to determine the probability that a length exceeds 2.7 meters.</p>	<i>COI</i>	<i>POI</i>	<b>06</b>

	b)	A study by Bechtel et al., 2009, described in the Archives of Environmental & Occupational Health considered polycyclic aromatic hydrocarbons and immune system function in beef cattle. Some cattle were near major oil- and gas-producing areas of western Canada. The mean monthly exposure to PM1.0 (particulate matter that is $< 1\mu\text{m}$ in diameter) was approximately $7.1 \mu\text{g}/\text{m}^3$ with standard deviation 1.5. Assume that the monthly exposure is normally distributed. (i) What is the probability of a monthly exposure greater than $9 \mu\text{g}/\text{m}^3$ ? (ii) What is the probability of a monthly exposure between 3 and $8 \mu\text{g}/\text{m}^3$ ? (iii) What is the monthly exposure level that is exceeded with probability 0.05? (iv) What value of mean monthly exposure is needed so that the probability of a monthly exposure more than $9 \mu\text{g}/\text{m}^3$ is 0.01?	CO1	PO1	08
	c)	Suppose that the time it takes a data collection operator to fill out an electronic form for a database is uniformly between 1.5 and 2.2 minutes. (i) What are the mean and variance of the time it takes an operator to fill out the form? (ii) What is the probability that it will take less than two minutes to fill out the form?	CO1	PO1	06
		<b>UNIT - III</b>			
5	a)	Differentiate between point estimate and interval estimate with an example	CO1 CO2	PO1 PO2	06
	b)	Of 1000 randomly selected cases of lung cancer, 823 resulted in death within 10 years. (i) Calculate a 95% two-sided confidence interval on the death rate from lung cancer. (ii) Using the point estimate of $p$ obtained from the preliminary sample, what sample size is needed to be 95% confident that the error in estimating the true value of $p$ is less than 0.03? (iii) How large must the sample be if you wish to be at least 95% confident that the error in estimating $p$ is less than 0.03, regardless of the true value of $p$ ?	CO1	PO1	06
	c)	A machine produces metal rods used in an automobile suspension system. A random sample of 15 rods is selected, and the diameter is measured. The resulting data (in millimeters) are as follows: 8.24 8.25 8.20 8.23 8.24 8.21 8.26 8.26 8.20 8.25 8.23 8.23 8.19 8.28 8.24 i) Calculate a 95% two-sided confidence interval on mean rod diameter. ii) Calculate a 95% upper confidence bound on the mean. Compare this bound with the upper bound of the two-sided confidence interval and discuss why they are different.	CO1 CO2	PO1 PO2	08
		<b>OR</b>			

6	a)	A civil engineer is analyzing the compressive strength of concrete. Compressive strength is normally distributed with $\sigma^2 = 1000(\text{psi})^2$ . A random sample of 12 specimens has a mean compressive strength of $\bar{x} = 3250$ psi. i. Construct a 95% two-sided confidence interval on mean compressive strength. ii. Construct a 99% two-sided confidence interval on mean compressive strength. Compare the width of this confidence interval with the width of the one found in part (I).	CO1 CO2	PO1 PO2	06																								
	b)	The concentration of active ingredient in a liquid laundry detergent is thought to be affected by the type of catalyst used in the process. The standard deviation of active concentration is known to be 3 grams per liter regardless of the catalyst type. Ten observations on concentration are taken with each catalyst, and the data follow: Catalyst 1: 57.9, 66.2, 65.4, 65.4, 65.2, 62.6, 67.6, 63.7, 67.2, 71.0 Catalyst 2: 66.4, 71.7, 70.3, 69.3, 64.8, 69.6, 68.6, 69.4, 65.3, 68.8 (i) Find a 95% confidence interval on the difference in mean active concentrations for the two catalysts. Find the P-value. (ii) If this difference of 5 grams per liter is really important, do you consider the sample sizes used by the experimenter to be adequate? Does the assumption of normality seem reasonable for both samples?	CO1 CO2	PO1 PO2	08																								
	c)	What are the properties of the good estimator	CO1	PO1	06																								
<b>UNIT – IV</b>																													
7	a)	The number of calls arriving at a switchboard from noon to 1:00 p.m. during the business days Monday through Friday is monitored for six weeks (i.e., 30 days). Let X be defined as the number of calls during that one-hour period. The relative frequency of calls was recorded and reported as <table border="1" style="margin-left: 20px;"> <tr> <td>Value relative</td> <td>5</td> <td>6</td> <td>8</td> <td>9</td> <td>10</td> </tr> <tr> <td>Frequency</td> <td>0.067</td> <td>0.067</td> <td>0.100</td> <td>0.133</td> <td>0.200</td> </tr> <tr> <td>Value relative</td> <td>11</td> <td>12</td> <td>13</td> <td>14</td> <td>15</td> </tr> <tr> <td>Frequency</td> <td>0.133</td> <td>0.133</td> <td>0.067</td> <td>0.033</td> <td>0.067</td> </tr> </table> i. Does the assumption of a Poisson distribution seem appropriate as a probability model for this data? Use $\alpha = 0.05$ . ii. Calculate the P-value for this test.	Value relative	5	6	8	9	10	Frequency	0.067	0.067	0.100	0.133	0.200	Value relative	11	12	13	14	15	Frequency	0.133	0.133	0.067	0.033	0.067	CO1 CO2	PO1 PO2	10
Value relative	5	6	8	9	10																								
Frequency	0.067	0.067	0.100	0.133	0.200																								
Value relative	11	12	13	14	15																								
Frequency	0.133	0.133	0.067	0.033	0.067																								

	b)	<p>A 1992 article in the Journal of the American Medical Association (“A Critical Appraisal of 98.6 Degrees F, the Upper Limit of the Normal Body Temperature, and Other Legacies of Carl Reinhold August Wunderlich”) reported body temperature, gender, and heart rate for a number of subjects. The body temperatures for 25 female subjects follow:</p> <p>97.8, 97.2, 97.4, 97.6, 97.8, 97.9, 98.0, 98.0, 98.0, 98.1, 98.2, 98.3, 98.3, 98.4, 98.4, 98.4, 98.5, 98.6, 98.6, 98.7, 98.8, 98.8, 98.9, 98.9, and 99.0.</p> <ol style="list-style-type: none"> <li>Test the hypothesis <math>H_0: \mu = 98.6</math> versus <math>H_1: \mu \neq 98.6</math>, using <math>\alpha = 0.05</math>. Find the P-value.</li> <li>Compute the power of the test if the true mean female body temperature is as low as 98.0.</li> <li>What sample size would be required to detect a true mean female body temperature as low as 98.2 if you wanted the power of the test to be at least 0.9?</li> </ol>	CO1 CO2	PO1 PO2	<b>10</b>
		<b>OR</b>			
8	a)	<p>Two different types of injection-molding machines are used to form plastic parts. A part is considered defective if it has excessive shrinkage or is discolored. Two random samples, each of size 300, are selected, and 15 defective parts are found in the sample from machine 1, and 8 defective parts are found in the sample from machine 2.</p> <ol style="list-style-type: none"> <li>Is it reasonable to conclude that both machines produce the same fraction of defective parts, using <math>\alpha = 0.05</math>? Find the P-value for this test.</li> <li>Suppose that <math>p_1 = 0.05</math> and <math>p_2 = 0.01</math>. With the sample sizes given here, what is the power of the test for this two sided alternate?</li> </ol>	CO1	PO1	<b>12</b>
	b)	<p>In a random sample of 85 automobile engine crankshaft bearings, 10 have a surface finish roughness that exceeds the specifications. Do these data present strong evidence that the proportion of crankshaft bearings exhibiting excess surface roughness exceeds 0.10?</p> <ol style="list-style-type: none"> <li>State and test the appropriate hypotheses using <math>\alpha = 0.05</math>.</li> </ol>	CO1	PO1	<b>08</b>

UNIT – V																									
9	a)	<p>An article in Concrete Research [“Near Surface Characteristics of Concrete: Intrinsic Permeability” (1989, Vol. 41)] presented data on compressive strength <math>x</math> and intrinsic permeability <math>y</math> of various concrete mixes and cures. Summary quantities are <math>n = 14</math>, <math>\Sigma y_i = 572</math>, <math>\Sigma y_i^2 = 23,530</math>, <math>\Sigma x_i = 43</math>, <math>\Sigma x_i^2 = 157.42</math>, and <math>\Sigma x_i y_i = 1697.80</math>. Assume that the two variables are related according to the simple linear regression model.</p> <p>i) Calculate the least squares estimates of the slope and intercept. Estimate <math>\sigma^2</math>. Graph the regression line.</p> <p>ii) Use the equation of the fitted line to predict what permeability would be observed when the compressive strength is <math>x = 4.3</math></p> <p>iii) Give a point estimate of the mean permeability when compressive strength is <math>x = 3.7</math></p> <p>iv) Suppose that the observed value of permeability at <math>x = 3.7</math> is <math>y = 46.1</math>. Calculate the value of the corresponding residual</p>	CO2 CO3	PO2 PO12	<b>12</b>																				
	b)	Discuss briefly the Multi linear Regression. With its application.	CO1	PO1	<b>08</b>																				
<b>OR</b>																									
10	a)	<p>A study was made to model the relation between weekly advertising expenditures and sales. During the study following data were recorded:</p> <table border="1" style="margin-left: auto; margin-right: auto;"> <tbody> <tr> <td>Advertising cost (Rs)</td> <td>20</td> <td>25</td> <td>30</td> <td>35</td> <td>40</td> <td>45</td> <td>50</td> <td>55</td> <td>60</td> </tr> <tr> <td>Weekly sales</td> <td>400</td> <td>420</td> <td>405</td> <td>480</td> <td>475</td> <td>490</td> <td>525</td> <td>560</td> <td>515</td> </tr> </tbody> </table> <p>i. Plot a scatter diagram</p> <p>ii. Find the equation of the regression line to predict weekly sales from advertising expenditures.</p> <p>iii. Compute Coefficient of determination <math>R^2</math> and interpret about model.</p> <p>iv. Test the hypothesis for Slope using <math>\alpha = 0.05</math></p> <p>v.</p>	Advertising cost (Rs)	20	25	30	35	40	45	50	55	60	Weekly sales	400	420	405	480	475	490	525	560	515	CO2 CO3	PO2 PO12	<b>16</b>
Advertising cost (Rs)	20	25	30	35	40	45	50	55	60																
Weekly sales	400	420	405	480	475	490	525	560	515																
	b)	Distinguish between correlation and regression.	CO1	PO1	<b>04</b>
