# B.M.S. College of Engineering, Bengaluru-560019

Autonomous Institute Affiliated to VTU

## January / February 2025 Semester End Main Examinations

**Programme: B.E.**

**Semester: V**

**Branch: Mechanical Engineering**

**Duration: 3 hrs.**

**Course Code: 20ME5DCORE**

**Max Marks: 100**

**Course: Operations Research**

**Instructions:** 1. Answer any FIVE full questions, choosing one full question from each unit.  
2. Missing data, if any, may be suitably assumed.

<b>UNIT - I</b>			<b>CO</b>	<b>PO</b>	<b>Marks</b>																							
1	a)	State the conditions required for a LPP to be in standard form. What is a canonical system of equations, explain with an example?	<i>CO1</i>	<i>PO1</i> <i>PO2</i>	<b>06</b>																							
	b)	Solve the following L.P.P. $\text{Max } Z = x_1 + 2x_2 + 3x_3 - x_4$ Subjected to $x_1 + 2x_2 + 3x_3 \leq 15$ $2x_1 + x_2 + 5x_3 \leq 20$ $x_1 + x_2 + x_3 + x_4 = 10$ $x_1, x_2, x_3, x_4 \geq 0$	<i>CO1</i>	<i>PO1</i> <i>PO2</i>	<b>14</b>																							
<b>OR</b>																												
2	a)	Explain the characteristics of an operations research model.	<i>CO1</i>	<i>PO1</i> <i>PO2</i>	<b>10</b>																							
	b)	A manufacturing firm produces two machines' parts P1 and P2 of a machine. For this it makes use of milling and grinding machines. The different machining times required for each part, the machining times available on different machines and then profit on each machine part as given below:	<i>CO1</i>	<i>PO1</i> <i>PO2</i> <i>PO4</i>	<b>10</b>																							
		<table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="text-align: center;">Machines</th> <th colspan="2" style="text-align: center;">Manufacturing time required(min)</th> <th style="text-align: center;">Maximum time available per week(min)</th> </tr> </thead> <tbody> <tr> <td></td> <td style="text-align: center;"><math>P_1</math></td> <td style="text-align: center;"><math>P_2</math></td> <td></td> </tr> <tr> <td>Lathe</td> <td style="text-align: center;">10</td> <td style="text-align: center;">1.5</td> <td style="text-align: center;">2500</td> </tr> <tr> <td>Milling machine</td> <td style="text-align: center;">4</td> <td style="text-align: center;">10</td> <td style="text-align: center;">2000</td> </tr> <tr> <td>Grinding machine</td> <td style="text-align: center;">1</td> <td style="text-align: center;">1.5</td> <td style="text-align: center;">450</td> </tr> <tr> <td>Profit per unit</td> <td style="text-align: center;">50</td> <td style="text-align: center;">100</td> <td></td> </tr> </tbody> </table> <p>Determine the no of pieces of <math>P_1</math> and <math>P_2</math> to be manufactured per week in order to maximize profit. Solve it graphically.</p>	Machines	Manufacturing time required(min)		Maximum time available per week(min)		$P_1$	$P_2$		Lathe	10	1.5	2500	Milling machine	4	10	2000	Grinding machine	1	1.5	450	Profit per unit	50	100			
Machines	Manufacturing time required(min)		Maximum time available per week(min)																									
	$P_1$	$P_2$																										
Lathe	10	1.5	2500																									
Milling machine	4	10	2000																									
Grinding machine	1	1.5	450																									
Profit per unit	50	100																										

**Important Note:** Completing your answers, compulsorily draw diagonal cross lines on the remaining blank pages. Revealing of identification, appeal to evaluator will be treated as malpractice.

<b>UNIT - II</b>					
3	a)	<p>Solve the following L.P.P using revised simplex method.</p> $\text{Max } Z = x_1 + 2x_2 + 3x_3 - x_4$ <p>Subjected to</p> $x_1 + 2x_2 + 3x_3 \leq 15$ $2x_1 + x_2 + 5x_3 \leq 20$ $x_1 + x_2 + x_3 + x_4 = 10$ $x_1, x_2, x_3, x_4 \geq 0$	<i>CO2</i>	<i>PO1</i> <i>PO2</i> <i>PO4</i>	<b>10</b>
	b)	<p>Find the optimal solution by using the revised simplex method.</p> $\text{Maximize } Z = x_1 + x_2 + 3x_3$ <p>subject to</p> $3x_1 + 2x_2 + x_3 \leq 3$ $2x_1 + x_2 + 2x_3 \leq 2$ $\text{and } x_1, x_2, x_3 \geq 0$	<i>CO2</i>	<i>PO1</i> <i>PO2</i> <i>PO4</i>	<b>10</b>
		<b>OR</b>			
4	a)	<p>Find the optimal solution by using the revised simplex method.</p> $\text{Max } Z = 2x_1 + x_2$ <p>subject to</p> $3x_1 + 4x_2 \leq 6$ $6x_1 + x_2 \leq 3$ $\text{and } x_1, x_2 \geq 0$	<i>CO2</i>	<i>PO1</i> <i>PO2</i> <i>PO4</i>	<b>10</b>
	b)	<p>Use the dual simplex method to show that the following linear program is infeasible.</p> $\text{Max } Z = -4x_1 - 3x_2$ <p>Subjected to</p> $x_1 + x_2 \leq 1$ $-x_2 \leq -1$ $-x_1 + 2x_2 \leq 1$ $x_1, x_2 \geq 0$	<i>CO2</i>	<i>PO1</i> <i>PO2</i> <i>PO4</i>	<b>10</b>
		<b>UNIT - III</b>			
5	a)	<p>To simulate interest and provide an atmosphere for intellectual discussion, an engineering faculty decides to hold special seminars on four contemporary topics like ecology, energy, transportation and bioengineering. Such seminars should be held once per week in the afternoons. However, scheduling these seminars (One for each topic, and not more than one seminar per afternoon) has to be done carefully so that the number of students unable to attend is kept minimum. A careful study indicates that the number of students who cannot attend a particular seminar on a specific date is as follows:</p> <p>Find the optimal schedule of seminars.</p>	<i>CO3</i>	<i>PO1</i> <i>PO2</i> <i>PO4</i>	<b>10</b>

			Ecology	Energy	Transportation	Bio-Engg																																				
			<b>Monday</b>	50	40	60	20																																			
			<b>Tuesday</b>	40	30	40	30																																			
			<b>Wednesday</b>	60	20	30	20																																			
			<b>Thursday</b>	30	30	20	30																																			
			<b>Friday</b>	10	20	10	30																																			
	b)		Solve the travelling salesman problem given by the following data.					<i>CO1</i>	<i>PO1</i>																																	
			$C_{12} = 20, C_{13} = 4, C_{14} = 10, C_{23} = 5, C_{24} = 6, C_{25} = 10, C_{35} = 6, C_{45} = 20$ , where $C_{ij} = C_{ji}$ and there is no route between $i$ and $j$ if the value of $C_{ij}$ is not shown.					<i>PO2</i>	<b>10</b>																																	
			<b>OR</b>																																							
6			A company purchases a material and stores in warehouses located in the following four cities: Warehouse Location (City) : A      B      C      D Capacity (Tonnes)                : 90      50      80      60					<i>CO3</i>	<i>PO1</i>																																	
			The warehouse supplies the material to manufacturing units in three cities that have the following demand: Manufacturing Units : Bharat      Janata      Redlamp Demand (Tonnes)                : 120      100      110					<i>PO2</i>	<b>20</b>																																	
			The following railroad shipping costs per tonne (in hundred rupees) have been estimated:					<i>PO4</i>																																		
			<table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th>Warehouse location</th> <th>Bharat</th> <th>Janata</th> <th>Redlamp</th> </tr> </thead> <tbody> <tr> <td>A</td> <td>7</td> <td>10</td> <td>5</td> </tr> <tr> <td>B</td> <td>12</td> <td>9</td> <td>4</td> </tr> <tr> <td>C</td> <td>7</td> <td>3</td> <td>11</td> </tr> <tr> <td>D</td> <td>9</td> <td>5</td> <td>7</td> </tr> </tbody> </table>					Warehouse location	Bharat	Janata	Redlamp	A	7	10	5	B	12	9	4	C	7	3	11	D	9	5	7															
Warehouse location	Bharat	Janata	Redlamp																																							
A	7	10	5																																							
B	12	9	4																																							
C	7	3	11																																							
D	9	5	7																																							
			Because of railroad construction, shipments are temporarily prohibited from Warehouse at city A to Bharat.																																							
			<ol style="list-style-type: none"> <li>Find the optimum distribution of the materials</li> <li>Are there multiple solutions? If so, identify all of them.</li> </ol>																																							
			Use North West Corner rule to start with.																																							
			<b>UNIT - IV</b>																																							
7	a)		Solve the given game.					<i>CO4</i>	<i>PO1</i>																																	
			<table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th colspan="2"></th> <th colspan="4">Player B</th> </tr> <tr> <th colspan="2"></th> <th>2</th> <th>-2</th> <th>4</th> <th>1</th> </tr> <tr> <th rowspan="4">Player A</th> <th>2</th> <td>1</td> <td>12</td> <td>3</td> <td></td> </tr> </thead> <tbody> <tr> <th>6</th> <td>2</td> <td>0</td> <td>6</td> <td></td> </tr> <tr> <th>-3</th> <td>-3</td> <td>7</td> <td>7</td> <td></td> </tr> <tr> <th>2</th> <td>2</td> <td>7</td> <td>7</td> <td></td> </tr> </tbody> </table>							Player B						2	-2	4	1	Player A	2	1	12	3		6	2	0	6		-3	-3	7	7		2	2	7	7		<i>PO2</i>	<b>10</b>
		Player B																																								
		2	-2	4	1																																					
Player A	2	1	12	3																																						
	6	2	0	6																																						
	-3	-3	7	7																																						
	2	2	7	7																																						

			<b>OR</b>																											
	10	a)	<p>A company has the option of buying one of the two machines, A and B. Machine A costs Rs. 5 lakhs, and its running and maintenance cost is Rs. 60,000/- for each of the first five years and increases by Rs. 20,000/- per year in the sixth and subsequent years. Machine B has the same capacity as that of A, but costs Rs. 2.5 lakhs only. However, its running and maintenance cost is Rs. 1.2 lakhs per year for the first five years and increases by Rs. 20,000/- per year thereafter. If the money is worth 10 percent per year, which machine should be purchased? What are the optimal replacement periods for each machine? Salvage value is assumed to be nil for both the machines.</p>	<i>CO5</i>	<i>PO1</i> <i>PO2</i>	<b>12</b>																								
		b)	<p>The following table shows the operating expenditures of running a machine whose capital cost is Rs. 60,000/-. Determine the optimum period of replacement of the machine.</p> <table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th style="text-align: center;"><b>Year</b></th><th style="text-align: center;"><b>1</b></th><th style="text-align: center;"><b>2</b></th><th style="text-align: center;"><b>3</b></th><th style="text-align: center;"><b>4</b></th><th style="text-align: center;"><b>5</b></th></tr> </thead> <tbody> <tr> <td style="text-align: center;">Resale value (Rs.)</td><td style="text-align: center;">42000</td><td style="text-align: center;">30000</td><td style="text-align: center;">20400</td><td style="text-align: center;">14400</td><td style="text-align: center;">9650</td></tr> <tr> <td style="text-align: center;">Cost of spares (Rs.)</td><td style="text-align: center;">4000</td><td style="text-align: center;">4270</td><td style="text-align: center;">4880</td><td style="text-align: center;">5700</td><td style="text-align: center;">6800</td></tr> <tr> <td style="text-align: center;">Cost of labour (Rs.)</td><td style="text-align: center;">14000</td><td style="text-align: center;">16000</td><td style="text-align: center;">18000</td><td style="text-align: center;">21000</td><td style="text-align: center;">25000</td></tr> </tbody> </table>	<b>Year</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	Resale value (Rs.)	42000	30000	20400	14400	9650	Cost of spares (Rs.)	4000	4270	4880	5700	6800	Cost of labour (Rs.)	14000	16000	18000	21000	25000	<i>CO5</i>	<i>PO1</i> <i>PO2</i>	<b>08</b>
