B.M.S. College of Engineering, Bengaluru-560019

Autonomous Institute Affiliated to VTU

January / February 2025 Semester End Main Examinations

Programme: B.E.

Semester : VII

Branch: Mechanical Engineering

Duration: 3 hrs.

Course Code: 22ME7HSOPR

Max Marks: 100

Course: Operations Research

Instructions: 1. Answer any FIVE full questions, choosing one full question from each unit.
2. Missing data, if any, may be suitably assumed.

UNIT - I			CO	PO	Marks
1	a)	Define i) Feasible Solution ii) Basic Feasible Solution iii) Unbound solution iv) Feasible Region v) Optimal BFS	<i>CO1</i>	<i>PO1 PO2</i>	10
	b)	A farmer has 100 acre. He can sell all carrots, Lettuce or radishes he raise the price. The price he can obtain is Re 1 per kg of tomatoes, Rs 0.75 a head for lettuce and Rs 2 per kg of radishes. The average yield per acre is 2000kg tomatoes, 3000 heads of lettuce and 1000 kgs of radishes. Fertilizer is available at Rs 0.5 per kg and the amount required per acre 100 kgs each for tomatoes and lettuce, and 50 kgs for radishes. Labor required for sowing, cultivating and harvesting per acre is 5 man-days for tomatoes and radishes, 6 man-days for lettuce. A total of 400 man days of labor available at Rs 20 per man day. Formulate and solve as linear programming problem model to Maximize the farmer's total profit.	<i>CO1</i>	<i>PO1 PO2 PO3 PO4</i>	10
OR					
2	a)	List and explain the six phases of OR.	<i>CO1</i>	<i>PO1 PO2</i>	06
	b)	Characteristics and limitations of OR	<i>CO1</i>	<i>PO1 PO2</i>	06
	c)	Using graphical method, solve the following LPP Maximize $Z = 3x_1 + 5x_2$, Subjected to $x_1 + 2x_2 \leq 2000$, $x_1 + x_2 \leq 1500$, $x_2 \leq 600$ and $x_1 \geq 0, x_2 \geq 0$	<i>CO1</i>	<i>PO1 PO2 PO3 PO4</i>	08
UNIT - II					
3	a)	Use revised simplex method to solve the following LPP: Maximize $z = 3x_1 + 5x_2$ subject to $x_1 \leq 4, x_2 \leq 6, 3x_1 + 2x_2 \leq 18$ and $x_1, x_2, x_3 \geq 0$.	<i>CO2</i>	<i>PO1 PO2 PO3 PO4</i>	10
	b)	A garment manufacturer has a production line making two styles of shirts. Style I requires 200 grams of cotton thread, 300 grams	<i>CO1</i>	<i>PO1 PO2 PO3</i>	10

Important Note: Completing your answers, compulsorily draw diagonal cross lines on the remaining blank pages. Revealing of identification, appeal to evaluator will be treated as malpractice.

		of dacron thread, and 300 grams of linen thread. Style II requires 200 grams of cotton thread, 200 grams of dacron thread and 100 grams of linen thread. The manufacturer makes a net profit of Rs. 19.50 on Style I, Rs. 15.90 on Style II. He has in hand an inventory of 24 kg of cotton thread, 26 kg of dacron thread and 22 kg of linen thread. His immediate problem is to determine, a production schedule, given the current inventory to make a maximum profit. Then he would like to know at what price it would be profitable to buy thread Solve the problem and explain how the concept of duality can be helpful to find out the right price for various kinds of thread		PO4 PO6 PO7																																																																		
		OR																																																																				
4	a)	Discuss the Advantages of Dual Simplex Method.	CO2	PO1 PO2 PO3	05																																																																	
	b)	Use the Dual Simplex method to solve the following problem: Maximize $z = -2x_1 - 3x_2$ Subject to: $x_1 + 3x_2 \geq 2$ $2x_1 + x_2 \leq 10$ $x_1 + x_2 \leq 8$ $x_1, x_2 \geq 0$	CO2	PO1 PO2 PO3 PO4	10																																																																	
4	c)	Discuss the advantages of Revised Simplex Method.	CO2	PO1 PO2	05																																																																	
		UNIT - III																																																																				
5	a)	Consider the following transportation problem. Check IBFS by VAM method and also Find the optimum solution.	CO3	PO1 PO2 PO3 PO4	10																																																																	
	b)	<table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th rowspan="2">From</th> <th colspan="4">TO</th> <th rowspan="2">Supply</th> </tr> <tr> <th>X</th> <th>Y</th> <th>Z</th> <th></th> </tr> </thead> <tbody> <tr> <td>A</td> <td>3</td> <td>2</td> <td>1</td> <td>15</td> </tr> <tr> <td>B</td> <td>1</td> <td>2</td> <td>3</td> <td>10</td> </tr> <tr> <td>C</td> <td>2</td> <td>3</td> <td>1</td> <td>14</td> </tr> <tr> <td>Demand</td> <td>10</td> <td>6</td> <td>12</td> <td></td> </tr> </tbody> </table> Find the initial basic feasible solutions for the following transportation problem by i) Northwest corner rule ii) Least cost method Determine the best optimal cost. <table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th></th> <th>D₁</th> <th>D₂</th> <th>D₃</th> <th>D₄</th> <th>D₅</th> <th>Supply</th> </tr> </thead> <tbody> <tr> <td>S₁</td> <td>4</td> <td>2</td> <td>3</td> <td>2</td> <td>6</td> <td>8</td> </tr> <tr> <td>S₂</td> <td>5</td> <td>4</td> <td>5</td> <td>2</td> <td>1</td> <td>12</td> </tr> <tr> <td>S₃</td> <td>6</td> <td>5</td> <td>4</td> <td>7</td> <td>3</td> <td>14</td> </tr> <tr> <td>Demand</td> <td>4</td> <td>4</td> <td>6</td> <td>8</td> <td>8</td> <td></td> </tr> </tbody> </table>	From	TO				Supply	X	Y	Z		A	3	2	1	15	B	1	2	3	10	C	2	3	1	14	Demand	10	6	12			D ₁	D ₂	D ₃	D ₄	D ₅	Supply	S ₁	4	2	3	2	6	8	S ₂	5	4	5	2	1	12	S ₃	6	5	4	7	3	14	Demand	4	4	6	8	8		CO3	PO1 PO2 PO3 PO4	10
